Ideation Phase
Define the Problem Statements

Date	08 April 2026
Team ID	SWTID-2026-6461
Project Name	Enforcing Mandatory Fields Using UI Policies and Migrating Changes with Update Sets
Maximum Marks	2 Marks

Customer Problem Statement Template:

In ServiceNow, users often submit forms such as incidents and requests without filling all the required fields. This happens because mandatory validations are not properly enforced using UI Policies. As a result, incomplete or incorrect data is recorded, which affects service quality and decision-making.

At the same time, developers and administrators face challenges in managing and migrating configuration changes across different environments. Without properly using Update Sets, changes may be missed, duplicated, or incorrectly deployed, leading to system inconsistencies and errors.

I am	Describe customer with 3-4 key characteristics – *who are they?*	A **ServiceNow Developer or System Administrator** responsible for maintaining data integrity and deploying configuration changes across multiple instances.
I'm trying to	List their *outcome* or *'job' they care about – what are they trying to achieve?*	**Enforce data entry standards** by making specific fields mandatory using **UI Policies**, and then **successfully migrate** those configurations from the **Development** environment to **Test/Production**.
but	Describe what problems or barriers stand in the way – *what bothers them most?*	**Manual data entry is often incomplete**, leading to poor reporting, and **moving these fixes manually** between environments is time-consuming and prone to human error.
because	Enter the "root cause" of why the problem or barrier exists – what needs to be solved?	**There is no native automation** to force users to fill out fields without a UI Policy, and without an **Update Set**, there is no reliable way to 'package' and transport the logic to other instances.
which makes me feel	Describe the emotions from the customer's point of view – how does it impact them emotionally?	**Anxious** about data quality and **stressed** by the potential for deployment failures or 'missing' logic when moving code between environments.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow user (end user / employee)	Submit forms in the system (like incident, request, etc.)	Some important fields are not marked as mandatory	There are no proper UI policies configured	Confused and leads to incomplete or incorrect data submission
PS-2	A ServiceNow developer / admin	Ensure data accuracy and move configurations from development to production	Changes are not properly tracked or migrated	Changes are not properly tracked or migrated	Frustrated and worried about errors, data loss, or missing configurations
